

My Animal's Habitat

Show how your animal survives

Choose **one animal**. You are going to show how its habitat keeps it alive.

Remember the four needs: **food, water, shelter** and **space**. An **adaptation** is a special feature that helps an animal survive in *its* habitat — like a duck's webbed feet or a cactus storing water.

1. For your animal, write down how its habitat gives it each of the four survival needs.

Need	Where my animal gets it in its habitat
Food	
Water	
Shelter	
Space	

2. Draw your animal in its habitat. Label where it gets its **food, water** and **shelter**, and one **adaptation** (a feature that helps it survive).

3. Finish this sentence:

"My animal survives in its habitat because..."
