

Conservation Response Planner

Build your evidence-based response

A scientist's response is built on **evidence**, not just opinion. Use the three steps below to build your conservation poster.

An opinion says "we should save it." An evidence-based response says "replanting native trees would help *because* the evidence shows the species needs them to shelter from predators."

1. The environmental issue, and the living thing it affects:

2. Two pieces of **evidence** showing the effect on survival (use facts from your source sheet):

	Evidence from my source
Evidence 1	
Evidence 2	

3. One conservation **action**, and a reason it would help. Use the stem: "[Action] would help [species] **because** the evidence shows..."
